Paddy Iyer

DATA ENGINEERING LEADER · STRATEGIC DATA ARCHITECT · PRIVACY-FIRST ENGINEERING · AI INNOVATOR

15+ years driving enterprise data transformation for global tech leaders across cloud/SaaS, fintech, gaming, and consumer platforms. Expert in cloud-native architectures, real-time analytics, privacy-first pipelines, and AI-augmented data operations. Proven builder of high-trust, high-performance data teams at petabyte scale. Published writer and thought leader on data architecture, AI agents, and the intersection of ancient wisdom with modern technology.

FEATURED EXPERIENCE

Senior Consultant — Privacy & Consent Architecture

Apr 2024 – Present

Meta | Safe Ads Program

Spearheading Meta's transformation from broad data access to consent-first advertising

Data Architecture & Privacy Engineering

- Architected the end-to-end 8-stage privacy remediation pipeline (classification → lineage → topology sort → pipeline dev → diff → deploy → compliance → downstream migration), enabling the team to systematically process assets that previously required ad-hoc, unstructured workflows
- Mitigated 700+ data assets for AAP and Consent Revocation, achieving 100% remediation of all high-risk assets in scope — directly enabling Meta's Safe Ads launch timeline and unblocking downstream teams waiting on compliant data
- Designed DP anonymization operators that enabled analytics teams to continue deriving insights from aggregate data without privacy risk — preserving analytical capability that would otherwise have been lost during the consent transition
- Landed 300+ code changes and managed 1,000+ tasks; established a repeatable triage and prioritization framework that reduced average asset remediation cycle time from weeks to days
- Identified and closed privacy gaps across cross-functional Dataswarm pipelines involving 3+ producer teams, preventing potential compliance audit failures and reducing cross-team resolution time by coordinating multi-producer DAG dependencies

AI-Augmented Remediation & Claude Code Skill

- Built an AAP remediation "Claude Code Skill" (YAML + Markdown playbook) that reduced new-member ramp-up time from ~2 weeks to ~2 days — standardizing consent-filtered inputs, naming conventions, workflows, code examples, and troubleshooting patterns into a single reusable guide
- AI-agent playbook cut remediation iteration time by 3–5x vs. manual approaches: auto-generated codemods, resolved multi-producer table alignment, and replaced fragile metastore signal tracking — enabling the team to scale throughput without adding headcount
- Leveraged prompt engineering and LLM-assisted code analysis to accelerate asset classification and pipeline debugging, reducing documentation overhead by ~70% and freeing engineers to focus on complex edge cases

DataSwarm Pipeline Engineering & Operational Quality

- Strengthened pipeline structure and maintainability — improved schema/dataset definitions, removed hardcoded paths, and streamlined lint/schedule/test workflows — reducing production incidents by establishing safer configuration patterns adopted across the remediation program
- Documented repeatable validation steps that cut time-to-first-deploy for new remediation pipelines by ~50%, enabling faster onboarding and fewer production rollbacks
- Applied SQL/Spark-style ETL best practices and automated checks that improved pipeline debuggability and operational consistency, contributing to the team's ability to sustain a 300+ change velocity over the engagement

TECHNICAL SKILLS

Spark | Hive | Hadoop | Databricks | Delta Lake | Snowflake | Redshift | MongoDB | DynamoDB | AWS | Azure | GCP | Python | SQL | Scala | Diff. Privacy | Claude Code | AI Agents | Prompt Eng. | Dataswarm | Informatica | Unity Catalog | Polymer | FGF | Unidash | BusinessObjects

EDUCATION

Data Engineering Cert.
UC Santa Cruz, 2013–14

B.S. Electrical Engineering
Sardar Patel College of Eng.

Diploma, Electronics & Comms
Technical Board, Tamil Nadu

CERTIFICATIONS

- VMware SaaS Essentials
- Hadoop Fundamentals
- NoSQL Databases
- NoSQL for SQL Professionals

PUBLICATIONS

- Cloud Computing
- All About Big Data
- Future Trends in BI

AI & THOUGHT LEADERSHIP

- 96+ articles on paddyspeaks.com
- Claude Code skill development
- Vibe coding methodology
- AI agent architecture writing

EARLIER CAREER

Lead Data Engineer
Meta
Sep 2015 – Sep 2017
80+ Dataswarm pipelines for petabyte-scale ads; Cross Device Insights, Outcomes Datamart + Norms DB

Data Engineer
GREE International
2014 – 2015
PII masking, Vertica→Redshift, 1,000+ table optimization

Data Architect
Chegg Inc.
Oct 2013 – Apr 2014

Technical Director
Model N
2011 – 2013
Life Sciences BI, cloud migration, ETL modularization

Architect
CallidusCloud
2005 – 2011
Incentive comp analytics, BusinessObjects XI

DW Architect
Hewlett Packard
2001 – 2005
Enterprise DW + 8 datamarts; ETL 18→3 hrs; 40–50% sales lift via clickstream

Data Architect / Sr. Engineer
Xoriant · Dept of Electronics, India
1990 – 2001

Lead Data Architect — Partner Data Engineering

Jan 2022 – Jan 2024

VMware

Strategic architect for VMware's Partner Data Platform — unifying fragmented partner data into a single governed analytics layer

Data Architecture & Platform Unification

- Designed and built the Partner Data Platform from the ground up, unifying fragmented partner data from 10+ disparate sources into a single governed analytics layer — eliminating data silos that had blocked cross-functional decision-making for years
- Designed an intuitive data catalog and governance model (Python/Confluence) that drove broad self-service adoption, cutting reliance on tribal knowledge by 60% and reducing ad-hoc data request volume to the data team by ~40%
- Implemented VMware's first structured data governance for partner data — classification, lineage tracking, and policy enforcement — achieving audit-ready status and enabling the team to pass compliance reviews without remediation
- Improved data consistency by 60% through standardized naming conventions, automated quality checks, and cross-team data contracts — directly reducing downstream reporting errors that had caused quarterly restatements

AI & Performance Engineering

- Pioneered an AI copilot for retrieval optimization, coding, and governance best practices — one of VMware's earliest LLM-assisted data engineering deployments, reducing routine query development time by ~30%
- Achieved 40%+ Spark processing time improvements through broadcast joins, caching strategies, and skew management — enabling SLA-critical reports to complete within their delivery windows for the first time
- Established automated monitoring and proactive alerting that replaced reactive firefighting, reducing pipeline incident response time from hours to minutes and cutting weekend on-call escalations significantly

Leadership & Cross-Functional Alignment

- Drove cross-team alignment across 5+ data teams via shared roadmaps, reducing duplicate pipeline development efforts by ~25% and accelerating delivery cycles
- Led workshops and knowledge-sharing sessions that upskilled 30+ partner data consumers, building organizational data literacy and reducing the "data team as bottleneck" pattern
- Engaged director/VP-level stakeholders to define a unified data vision, securing budget and headcount for the platform roadmap — resulting in the team growing from 3 to 8 engineers during the engagement

Senior Consultant — Ads, Commerce & Privacy

Jul 2019 – Dec 2021

Meta

Led high-impact projects across Meta's Ads, Commerce, and Privacy teams, architecting secure, scalable, and compliant data platforms

Commerce Data Architecture

- Architected a centralized data warehouse that unified product and seller data into a single analytics layer — enabling commerce teams to reduce decision-making cycle time from weeks to days and directly informing category investment strategies
- Designed and launched the Category Management Data Warehouse, providing deep cross-vertical analysis that empowered commerce teams to identify underperforming seller segments and reallocate resources, contributing to measurable GMV growth
- Owned the SMB funnel redesign, improving query performance by 3x while maintaining key functionality — enabling the pipeline to scale from thousands to tens of thousands of small business advertisers without infrastructure changes

Privacy Engineering & Compliance

- Led privacy remediation across 1,200+ SMB 2.0, Customer Journey, and BPO tables — resolving critical design flaws that had left the team exposed to compliance risk, and establishing remediation patterns later adopted at scale in the Safe Ads program
- Collaborated with Hive Anonymization engineers to enhance anonymization processes, enabling the ads and commerce data products to pass privacy audits without manual intervention — reducing audit preparation effort by ~60%
- Drove Salesforce ID deprecation and Facebook ID integration across 1,000+ pipelines, eliminating an external vendor dependency that had caused data consistency issues affecting ~15% of cross-system joins

Data Platform Migration

- Spearheaded migration of 1,000+ Hive pipelines to Spark, automating ~70% of conversion tasks — reducing what was projected as a 12-month migration to under 6 months and enabling commerce/payments teams to benefit from Spark's performance gains ahead of schedule
- Built chargeback representment and leakage dashboards (FGF, Dataswarm, Unidash) that identified ~$XM+ in previously undetected revenue leakage, enabling the finance team to recover funds and close monitoring gaps
- Designed Marketplace App reliability dashboard covering payin/payouts and user stability — reducing MTTR for payment-related incidents by providing real-time visibility that replaced manual log analysis

ADDITIONAL RECENT EXPERIENCE

Data Engineer Consultant
Dec 2017 – Apr 2018

LinkedIn

- Led GDPR compliance efforts: encrypted sensitive customer data into LinkedIn Dali storage using Hive, Python, and Pig; retired legacy data sources and feeds; migrated to a stable, compliant framework

Lead Data Engineer Consultant
Sep 2015 – Sep 2017

Meta

- Developed 80+ complex Dataswarm pipelines for petabyte-scale ads data across Sales Operations and Marketing Intelligence: Cross Device Insights, Global Account Pipeline, Gaming Apps Reporting, Outcomes Datamart + Norms DB, Facebook Media & Live Monetization
- Deep expertise in petabyte-scale ads data, partnering with cross-functional teams to optimize revenue generation strategies and deliver scalable analytics
